

## Spicer Performance Driveshafts: New coverage for Jeep® Gladiator JT

Date: **November 2019**

To: **All Dana Aftermarket Group Spicer® Driveshaft Customers**

The Dana Aftermarket Group is pleased to announce expanded availability of Spicer performance driveshafts for the Jeep Wrangler JL and Jeep Gladiator JT. New for the Jeep Gladiator is our rear system balanced 2-piece Spicer® driveshaft. The JT rear Spicer® driveshafts deliver increased strength and the lowest possible NVH on the market, made possible by the utilization of Spicer® constant velocity joints and Spicer® 1350 series u-joints. Featuring several upgrades designed for added durability on the trail, this driveshaft includes high strength 3" DOM tubing, and the 2-piece design allows the driveshaft to stay tucked up to the frame away from obstacles on the trail. Being a 2-piece, it also ensures no critical speed issues or clearance issues, as a 1-piece requires a larger tube to meet critical speed requirements. Dana gives you everything necessary for a bolt-in solution including a center bearing drop bracket kit designed to accommodate vehicles lifted up to 6.5".

Use the charts below to identify the correct Spicer performance driveshaft for your Jeep. Designed by the performance brand you trust and built with the innovations that give you the confidence to take on the toughest terrain.
